                                                                                                                                            arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                   NOTE: This is a 'working draft' sequence. It currently consists of 26 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8311

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mammals, e.g. infections of the oral cavity, vagina, urethra, ear or skin, or systemic infections.
                                                                                         Cow; gene; ss; histatin; bovine; salivary secretion; oral cavity; non-immune defence system; oral candidosis; gene therapy; microbial infection; fungal infection; dental caries; plaque; tartar; cystic fibrosis; systemic infection; Candida infection; mastitis; fungicide; antibacterial.
                                                                                                                                                                                                                          /*tag= a

RESULT 2
               ABX11388
                                 conjugated by which computes sequences expressed in bovine. Histatins are histidine rich and specific to the salivary secretions. They are believed to the function as part of the non-immume defence system, particularly in the cardical cavity and have promise as therapeutic agents in humans with oral cavity and have promise as therapeutic agents in humans with oral candidesis. Also disclosed are compositions comprising the histatin polymucleotide, and at least one component consisting of polypeptide or polymucleotide, and at least one component consisting of histatin polymucleotide, and at least one composition or polypeptide, polypeptide, or the cosmetic composition or instatin polymucleotide is useful for treating (e.g. gene therapy) a discrete in a mammal, particularly microbial or fungal infections. The histatin polymucleotide is also useful in genome mapping, physical mapping or in the positional cloning of genes. Specifically, the colypeptide or polymucleotide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartar), vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aerudinosal, mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polymucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine treating mastitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

The invention discloses isolated histatin polynucleotides and polypeptides, which comprise sequences expressed in bovine. Histatins are historine rich and specific to the salivary secretions. They are believed to finite find the specific to the salivary secretions. They are believed to complete as part of the non-immune defence system, particularly in the cardidosis. Also disclosed are compositions comprising the histatin composition or polypeptide or polymucleotide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The histatin polymucleotide, polypeptide or the comment omposition of comprising the polypeptide, is useful for treating (e.g. gene therapy) a disorder in a mammal, particularly microbial or fungal infections. The histatin polymucleotide is also useful for treating (e.g. gene therapy) a classification or in the positional cloning of genes Specifically, the polypeptide or polymucleotide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartari, caused by Pseudomonas aeroginas, mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or prolymucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine treating mastitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mammals, e.g. infections of the oral cavity, vagina, urethra, ear or skin, or

the invention unscuoses isometed install publications and installing and installing and installing confirms and specific to the salivary secretions. They are believed histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the coral cavity and have promise as therapeutic agents in humans with oral cardidosis. Also disclosed are compositions comprising the histatin of confidence or polymentoleotide, and at least one component consisting of physicological or plarmaceutical carriers or immunostimulants. The histatin polymucleotide, polypeptide, or the cosmetic composition of comprising the polypeptide, is useful for treating (e.g. gene therapy) a discret in a mammal, particularly microbial or fungal infections. The histatin polymucleotide is also useful in genome mapping, physical conspiculation or in the positional cloning of genes. Specifically, the comprision of the oral cavity (e.g. dental caries, plaque or tartar), or infections of the oral cavity (e.g. dental caries, plaque or tartar), or caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polymucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine constitution is the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention discloses isolated histatin polymucleotides and polypeptides, which comprise sequences expressed in bovine. Histatins are historial at the and specific to the salivary secretions. They are believed to chistidine rich and specific to the salivary secretions. They are believed to complete as part of the non-immune defence system, particularly in the cardidosis. Also disclosed are compositions compressing the histatin polypeptide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The comprising the polypeptide, for the cosmetic composition of histatin polypeptide, is useful for treating (e.g. gene therapy) a disorder in a mammal, particularly microbial or fungal infections. The histatin polymucleotide is also useful for treating fungal or bacterial histatin polymucleotide is also useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartarl, subjuncteotide is also useful for treating fungal or tartarl, or subjunctory tract (e.g. cystic fibrosis caused by pseudomonas aeruginosis), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polypuctide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine the histatin like polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mammals, e.g. infections of the oral cavity, vagina, urethra, ear or skin, or systemic infections.

The invention discloses isolated histatin polymucleotides and polypeptides, which comprise sequences expressed in bovine. Histatins are histafine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the oral cavity and have promise as therapeutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin polypeptide or polymucleotide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The histatin polymucleotide, as useful for treating (e.g. gene therapy) a disorder in a mammal, particularly microbial or fungal infections. The histatin polymucleotide is useful in genome mapping, physical mapping or in the positional cloning of genes. Specifically, the polypeptide or polymucleotide is also useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartar), vaginal, urethra, ear. skin, respiratory tract (e.g. cystic fibrosis systemic infections such as systemic Candida infection. The polypeptide or polymucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is the bovine mammary tissue converted specific sequences presented is the bovine mammary tissue converted to the converted converted to the converted converted to the mammary converted to the converted converted to the mammary tissue converted converted converted to the mammary tissue converted converted converted to the mammary converted
                                                                              New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mammals, e.g. infections of the oral cavity, vagina, urethra, ear or skin, or

polypeptides, which comprise sequences expressed in bowine. Histatins are histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the card cavity and have promise as therapeutic agents in humans with oral cavity and have promise as therapeutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin or polypeptide or polymentoeotide, and at least one component consisting of physiological or plarmaceutical carriers or immunostimulants. The comprising the polypeptide, particularly microbial or fungal infections. The histatin polymucleotide is useful for treating (e.g. gene therapy) a comprising the polypeptide, is useful for treating (propertion). The positional cloning of genes. Specifically, the mapping or in the positional cloning of genes. Specifically, the conjugation or polymucleotide is useful for treating fungal or bacterial conjugations or in the positional cloning of genes. Specifically, the conjugation or polymucleotide is useful for treating fungal or bacterial conjugations of the oral cavity (e.g. dental caries, plaque or tartax), caused by Resudomonas acruginosa, mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polymeptide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine conjugation in the polymeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             197

The invention discloses isolated histatin polymucleotides and polypeptides, which comprise sequences expressed in bovine. Histatins are polypeptides, which comprise sequences expressed in bovine. Histatins are histatine and spart of the non-immune defence system, particularly in the coral cavity and have promise as therapeutic agents in humans with oral cardidosis. Also disclosed are compositions comprising the histatin polypeptide or polypeptide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The comprising the polypeptide, is useful for the composition of discret in a mammal, particularly microbial or fungal infections. The histatin polymucleotide is also useful in genome mapping, physical or polymucleotide is also useful for treating fungal or bacterial mapping or in the positional cloning of genes. Specifically, the mapping or in the positional cloning of genes. Specifically, the collections of the oral cavity (e.g. dental caries, plaque or tartar), vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polymucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine the control or polymore presented is a cDNA encoding a bovine control or c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a human expressed sequence tag (EST). The polynucleotide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliocating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, hematopolesis regulating activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, haematocopy activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The polynucleotide may also be useful for

The GENSET sequences are useful for preparing a composition for treating GENSET related disorders. They can also be used as markers for tissues in which the corresponding protein is preferentially expressed, as molecular weight markers on Southern gels, as chiromosome markers or tags to identify chromosomes, and as reagents in assays to quantitatively

The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ36911) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity. The polynucleotides are useful for constructing or expanding chromosome maps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 109

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           임
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           임
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              o'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to novel GENSET polynuclectides (ABZ36404-ABZ36911) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity. The polynucleotides are useful for constructing or expanding chromosome maps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180 TATGGCTCTCATCCTAGCCATGATTAGAGCTGATTCATCTGAAGAGAAACGTCACAGGAA 239

These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    361 GATTCTCCTCTTGAGTAAAAGGACTCAGCCAACTATGAAGTTTTTTTGTTTTTTGCTTTAAT 420

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to human lysine-rich statherin protein (LRSP) (AAY94526). The CDNA sequence encoding this protein was identified through analysis of a CDNA library of breast tumour tissue (BRSTNOT14). The LRSP sequence was found to have homology with the DNA of human statherin (the present sequence) and human basic histidine-rich protein (AAY94528). Human statherin is a phosphoprotein that acts as an inhibitor of precipitation of calcium phosphate salts in the oral cavity. The LRSP polypeptide and its antagonists may be useful for treating or preventing disorders associated with the activity of LRSP. Such disorders include autoimmune/inflammatory disorders (for example AIDS, allergies, asthma, diabetes mellitus), bacterial and fungal infection and cancers (such as leukemia, adenocarcinoma, melanoma). Antibodies to LRSP may be useful for diagnosis of the above disorders
                                                                                                 Lysine-rich statherin protein; LRSP, acidic phosphoprotein; human; precipitation inhibitor; autoimmune; inflammatory disorder; AIDS; asthma; allergy; diabetes mellitus; fungal; bacterial infection; cancer; leukemia; adenocarcinoma; melanoma; ds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GGACTCCACCAAATATGAAGATCTTTATCTTTGTCTTATATGGCTCTCATCCTAGCCA 199

2,
                                     The invention relates to a novel NOVX polypeptide. The polypeptide of the invention demonstrates cardiant, antiarteriosclerotic, hypotensive, cytoscatic, ancrectic, antidiabetic, immunosuppressive, anti-HIV, neuroprotective, nootropic, antiparkinsonian, antiasthmatic and synaecological activities and may be useful in diagnosing, treating or preventing NOVX-associated disorders including cardiomyopathy, preventing NOVX-associated disorders including cardiomyopathy, atheroscierosis, hypertension, cancer, obseity, diabetes, AIDS, multiple sclerosis, graft-versus-host disease, Alzheimer's disease, Askhison's disease, asthma or fertility disorders. Furthermore, the polypeptides may be utilised as vaccines whilst the nucleic acids may be used as hybridisation probes, in gene therapy, chromosome mapping, tissue typing, preventive medicine and pharmacogenomics. The current sequence is that of the human NOV CDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GATA-----TITICAACAATACCAGCCATATCAACGATATCCACTAAATTATCCTCCTG 313

The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel

CC polypeptides. Also claimed is a polypeptide encoded by the polynucleotide or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide or the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide or is useful as a primer for synthesising the polynucleotide in an expressible manner for synthesising the polynucleotide or as a probe conformant carrying the polynucleotide or as a probe conformant carrying the polynucleotide or as a probe conformant carrying the polynucleotide and encoded proteins are useful as pharmaceutical agents and many disease-related genes may be included in them, for developing a diagnostic marker or conformant or regeneration. Membrane proteins, isgnal transduction-related proteins, isgnal transduction-related proteins, disease-related proteins or encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for disease (e.g. osteoporosis, encoding them can be used as in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1083 GAACCCAGCCAACTATGAAGTTCCTTGTCTTTGCCTTCATGTTTGGCTTTCATGGTTTCCA 1142

GENERAL INFORMATION:
APPLICANT: OLEK, Alexander
APPLICANT: PIEBENBROCK, Christian
APPLICANT: BERLIN, Kurt
TITLE OF INVENTION: Diagnosis of Diseases Associated with DNA Replication
TITLE OF INVENTION: by Assessing DNA Methylation
FILE REFERENCE: 5013.1012
CURRENT APPLICATION NUMBER: US/10/204,708
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CTTTTCTCTGTCACTTACCATGCATGCTTAATAAATTGATCTATCAAGCATAAAAA 600
